

## K-Protector® Return Idler Guard

### Nip Point Protection

**K-Protector® Return Idler Guard** meets the Australian Standard AS4024.3610. Conveyor guarding is a vital piece of equipment on all installations where it is possible to be classed as a hazard. Conveyor guards do not have to be complicated nor interfere with productivity.

K-Protector® Return Idler Guard is a practical and safe solution to provide roller nip point protection.

The Guard is designed for convenient access for maintenance and is available to suit all roller diameters and belt widths. It is lightweight and its design allows for easy but safe access for roller change out or cleaning.

#### Key Benefits:

- Protects the user by eliminating nip points.
- Compliant release mechanism allows guard to pass through the end plates for maintenance.
- Available for steel or self-cleaning rubber disc return rollers in all belt widths.
- Acts as a basket to catch roller in the event of idler failure.
- Composite polymer leading edge protects the belt from wear/abrasion.
- All standard belt widths available.
- Custom designs available.

**The unit is designed to help minimise the potential for injury. The owner / operator should follow safe work practice procedures and never make adjustments to unlocked machinery.**

**This product has been designed in accordance with Australian Standards. However, the customer is required to assess how this product complies in their specific application to meet the Australian Standard or their company's safety protocols.**
